

Climate change

Responding to the climate-emergency requires forward-looking strategic decision making and investment. Climate risk and opportunities will be a key differentiator and market driver of the 2020s. Businesses will need to transition to an emissions free world, which means they will need to re-define their purpose, business models, investments and stakeholder engagement.

We advise public and private companies concerning the regulatory landscape, risk management, finance, reporting and disclosure, stakeholder engagement, dispute avoidance, dispute resolution and crisis management on all of these issues.

Our sector focus approach brings deep expertise to the unique transition needs of particular economic segments. We put environmental, social and governance factors at the heart of resilience.

- Renewable energy and energy transition;
- Emissions trading and emissions tax;
- Resource efficiency;
- Climate and resilience finance;
- Development of legislation and best practice;

- Directors' duties;
- Climate-related reporting and disclosure;
- Shareholder activism;
- Dispute avoidance and crisis management;
- Mitigating legal and reputational risks;
- Climate-related litigation; and
- Investment treaty disputes.
